

Motor Skills for Life

at Brownsburg High School

Sponsored in part by

Students impacted: 47 per year | Subject: Cross-curricular/vocational skills

As many of the Applied Skills students begin their vocational and pre-vocational work, the teachers are noticing certain motor skills that are not fully developed, rendering the students more dependent on others to complete certain tasks. When the tasks are further broken down, many of these students are struggling with bilateral integration, crossing the midline, pincer/lateral grasps, as well as general strength. As the students get older, there are less age-appropriate items to work on these skills, and the Applied Skills classrooms would benefit from not only more, but new options to develop these skills. This BEF grant provided a variety of age-appropriate materials and activities to give students additional opportunities to work on motor skills that will increase their success for future employment.
